

Multisensory Integration in Ultra-Low Vision

- **Do you or does your loved one have very low vision?**
- **Do you use assistive technology (e.g. Smart Apps, Smart Glasses etc.) to help you manage and get around, and not depend exclusively on a sighted guide?**
- **Are you 12+ years old?**

In the Multisensory Integration in Visual Impairment (MIVI) lab at the SUNY College of Optometry, we are studying ways to improve how people with very low vision combine multiple senses to carry out daily activities. Participants may be compensated up to \$30 per 2-3 hours visit for up to 25 visits, as well as \$100 for completion of the study.

Please reach out for more information.
